

PAVLO MOSKVIN

Frontend Engineer

CONTACT

Phone: +38 (050) 861-32-33

Email: 23moskvina@gmail.com

LinkedIn: linkedin.com/in/pavlo-moskvina

GitHub: github.com/Moskvina23

EDUCATION

Lviv Polytechnic National University

Mechanical Engineering,
Master's Degree
2013 - 2018

Frontend Developer Intern

SoftServe IT Academy
2021 - 2022

SKILLS

Frontend: React, Redux, TypeScript,
JavaScript (ES6+), Material-UI, SASS

Integrations: Mapbox GL, REST API,
Axios, WebSockets

Tools: ESLint, Prettier, Git, Webpack,
Chrome DevTools

Methodologies: Agile, Scrum

Personal Portfolio:

pavlo-moskvina-web-developer.netlify.app

Client Portfolio:

alyona-tkachenko-portfolio.netlify.app

ABOUT ME

Frontend developer with over 3 years of experience working on web applications using modern libraries and frameworks. My focus is on scalability, performance, typing, and clean code. Working in a fast-paced development environment, familiar with Agile/Scrum team methodology. I strive to continue growing as a Fullstack developer in large, ambitious projects.

EXPERIENCE

Feodal (May 2023 - Present)

Developed and integrated mapping solutions:

- Integrated and configured interactive maps using Mapbox GL, providing visualization of geodata, marker placement, and advanced geolocation features.
- Developed components for editing and displaying geographic objects (polygons), ensuring accuracy and usability of geospatial data.

Created interfaces for data processing:

- Developed modules for working with various data types, including validation, correctness checking, and formatting to ensure their compatibility with different system components.

Optimized and improved performance:

- Optimized frontend application performance for efficient work with large datasets, including improving rendering speed, optimizing requests, and data caching.
- Implemented TypeScript to improve project stability and scalability, reducing the number of runtime errors and improving code maintainability.

Participated in team development:

- Participated in the development of project architecture, technology selection, and implementation of modern development patterns and practices.
- Collaborated with backend developers to integrate APIs, ensuring stable data exchange between the frontend and server.

Worked with APIs and integrations:

- Integrated API services for data exchange with the backend and other systems, ensuring stable and efficient interaction between different parts of the system.
- Developed modules for real-time tracking of equipment, using data obtained through APIs and displaying it on the map.
